Expansion Board Instruction

In order to meet clients’ further demands, our company has done some improvements for LED controller, that is, expansion board.

1. Function: Expansion board can only work with M31 and A31 control cards, so that one led control card could connect two HUB to connect 16 rows of module.
2. Expansion board’s picture as shown in below:
Expansion board’s dimension:
Connecting expansion board with HUB, please make sure that the direction is right, as shown in below:
3. connection diagram of HUB and controller with the help of expansion board, as shown in image 1-4 in below:

![Image 1-4](image-1-4.png)

NOTE: one controller could connect two pieces of HUB with the help of expansion board.
